Objectives

Pursuant to my recent graduation from Georgia Tech, I am searching for a position in an Internet and media & communications related field. My ideal position would involve design, layout, and coding of web pages or design maintenance with a focus on standards, aesthetics and interaction with clients and customers to insure their satisfaction with the finished product.

Background

I am an Atlanta based web designer with a passion for details and a love of clean code. My educational background lies in the interdisciplinary field of Science, Technology, & Culture, and I've been fascinated with the web ever since Netscape Navigator was the *it* browser.

My work focuses on typography, texture, and clarity. Semantics and emerging browser technologies are very important to me. If a site is attractive, but still doesn't convey information well both to the audience and the web at large, then it is only 50% effective.

I am a strong proponent of open source design software, as I believe that entry into the field should not be gated by the availability of the tools necessary to do the job.

I have been working with web design personally, academically, and professionally for a combined period of over 10 years. I have produced sites for small businesses, online communities, bands, and individuals.

Education

Bachelor of Science
Science, Technology and Culture
Focus: Media Studies

Georgia Institute of Technology
Awarded: May, 2013.

Coursework

Design for the Internet
Objected Oriented Programming
Media Computation
Professional Communications
